469. Hutter, Charles G.

New concepts of osteomyelitis in the newborn infant. J. of Pediatrics. May, 1948. 32:5:522-529.

"Osteomyelitis in the infant should not be considered a benign infection. All minor infections in the newborn infant should be considered precursors of severe infection and treated accordingly... While the mortality rate is approaching zero in osteomyelitis infections, the number of cases with severe bone damage and its subsequent disability is becoming greater. In view of this change the prognosis for complete recovery without deformity should be held in abeyance, especially in the severe type of infection."

CEREBRAL PALSY—SPEECH CORRECTION

496. Hood, Philip N., and others.

A study of the relationships of certain environmental factors to the speech of cerebral palsied children, by Philip N. Hood, Kennon H. Shank, and Doris B. Williamson. Denver, Colo., The authors, 1947.

76 p., illus. Typed.

Thesis for Master of Arts, University of Denver, August, 1947.

"There is a seeming lack of perfect correspondence between the speech adequacy and the neuromuscular involvement in cerebral palsied children. Because of this lack of perfect correspondence, this study to determine what relations exist between the attitudes and personality deviations in the parents and the speech adequacy of cerebral palsied children was conducted. Forty-one families having a cerebral palsied child were selected at random through the cooperation of the Colorado Society of Cerebral Palsy. A battery of six tests was administered to the parents of these cerebral palsied children. The speech adequacy of each child was rated by each of the three investigators according to articulation, voice quality and general overall effectiveness. The general physical muscle involvement and the speech muscle involvement were rated by the physical therapist at Children's Hospital, Denver, in cooperation with the medical doctor serving each case. The test scores of the parents, the speech ratings of the investigators and the physical ratings of the medical personnel were correlated to determine their relationship..."

BULLETIN ON CURRENT LITERATURE

The publications listed in this issue have been received by the library of the National Society for Crippled Children and Adults and are available for loan. The library does not stock copies for sale. Prices are listed, when known, so that orders may be addressed directly to the publishers. The publications are listed by author and title under the subject heading by which the item is cataloged and filed in the library. The subject headings in the Bulletin can be identified by being in all-capital letters.

Because the library may have only a limited number of copies of any item listed, and because of the great number of requests frequently received, it is suggested that the resources of local libraries be investigated first. The services of the library are extended to organizations and individuals whose local resources are so limited as to make information otherwise unavailable. It is understood that the borrower agrees to pay shipping charges for sending him the loan material and for returning it to the library.

The National Society for Crippled Children and Adults is a nationwide organization with headquarters in Chicago and more than 2,000 member state and local societies for the crippled and handicapped throughout the country. Its many projects and services are directed and supervised by professionally trained specialists. The Society provides services in health, welfare, education, rehabilitation, recreation, and employment to all types of handicapped persons. All services of the Society are established and carried out in a manner to supplement and extend and not to duplicate or compete with the services of any other agency, public or private. The National Society is supported by the annual sale of Easter Seals.
